Forensic Science is an emerging choice for new generation with the constant increase in awareness against crime and criminal justice system. This course was introduced in the institute with the help of Department of Chemistry in 2018 in view that the department will help in Criminal Justice System by providing quality education to forensic science students as they will be the future forensic expert of our nation. The students can also get advanced knowledge in this field by collaborating with Police Head Quarters, Central and Regional Forensic Science Laboratory as well as Cyber Cell located at Bhopal. The city is transforming itself as an emerging educational hub which will definitely fruitful for students careers related matters. In short span of time department performed excellent team work in the field of training, workshops, guest lectures, peer group teaching etc. I wish the same for upcoming years.

Dr. Anjali Acharya
HOD Forensic Science
